# 21. 合并两个有序链表

## 原题链接:

https://leetcode-cn.com/problems/merge-two-sorted-lists/

## 题目描述:

将两个升序链表合并为一个新的**升序**链表并返回。新链表是通过拼接给定的两个链表的所有节点组成的。

## 示例:

输入: 1->2->4, 1->3->4 输出: 1->1->2->3->4->4

#### **Solution:**

#### 递归法:

```
class Solution {
public ListNode mergeTwoLists(ListNode l1, ListNode l2) {
    if (l1 == null)
    return l2;
    if (l2 == null)
    return l1;
    if (l1.val <= l2.val) {
        l1.next = mergeTwoLists(l1.next, l2);
        return l1;
    }
    else {
        l2.next = mergeTwoLists(l1, l2.next);
        return l2;
    }
}</pre>
```

## 迭代法:

```
class Solution {
   public ListNode mergeTwoLists(ListNode l1, ListNode l2) {
      ListNode head = new ListNode(-1);
      ListNode cur = head;
   while (l1 != null && l2 != null){
      if (l1.val <= l2.val){
            cur.next = l1;
            l1 = l1.next;
      }
      else{
            cur.next = l2;
      }
}</pre>
```

```
12 = 12.next;
}
cur = cur.next;
}
if (11 != null)
cur.next = 11;
if (12 != null)
cur.next = 12;
return head.next;
}
```
